

AirMetER-DX

FOUR FAITH HIGH GAIN ANTENNA SETUP GUIDE

Revision | June 2023

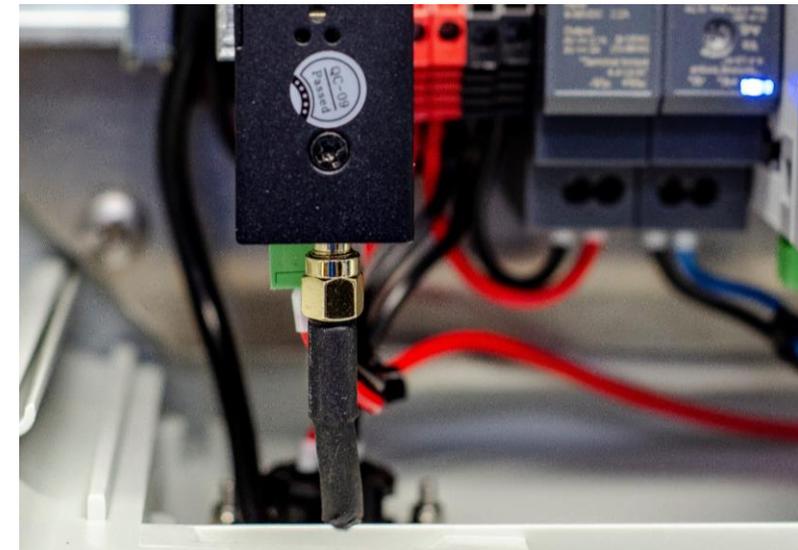

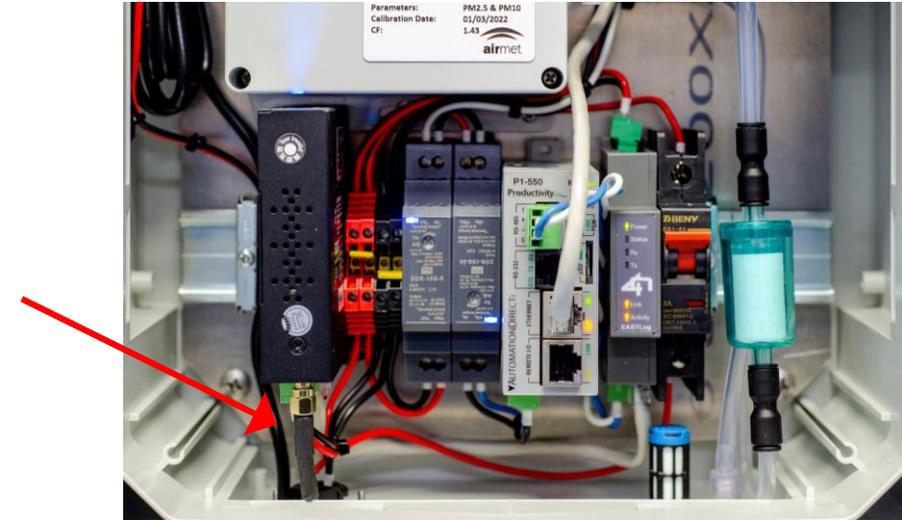

LAYOUT OVERVIEW

HIGH GAIN ANTENNA SETUP

1. The AirMetER-DX does not have the high gain antenna port by default, however if the instrument was meant to use one, then a gland will have been installed to accommodate the high gain antenna.
2. If the instrument doesn't have a gland yet, it will need to be fitted by drilling and installing the appropriate gland to accommodate the high gain antenna cable.
3. To use the high gain antenna, simply unplug the inbuilt antenna and replace it with the high gain antenna.
